## Introduction

The WeRateDogs Twitter archive contains basic tweet data for all 5000+ of their tweets and making this twitter archive enhanced and data gathered from twitter API retweet count and favorite count also .

Image predication file table of tweet id, image URL, and the image number that corresponded to the most confident prediction .

## Data Wrangling

Before i could begin the analysis , the data had to be wrangled into shape to make it easier. I assessed the data both visually and programmatically for quality and tidiness .

The quality of data is determined mainly by looking at several aspect to ensure that is complete and valid

### IN Gathering

I collect data from several recourse :

- Twitter archive
- Image prediction
- Twetter API

### IN Assessing

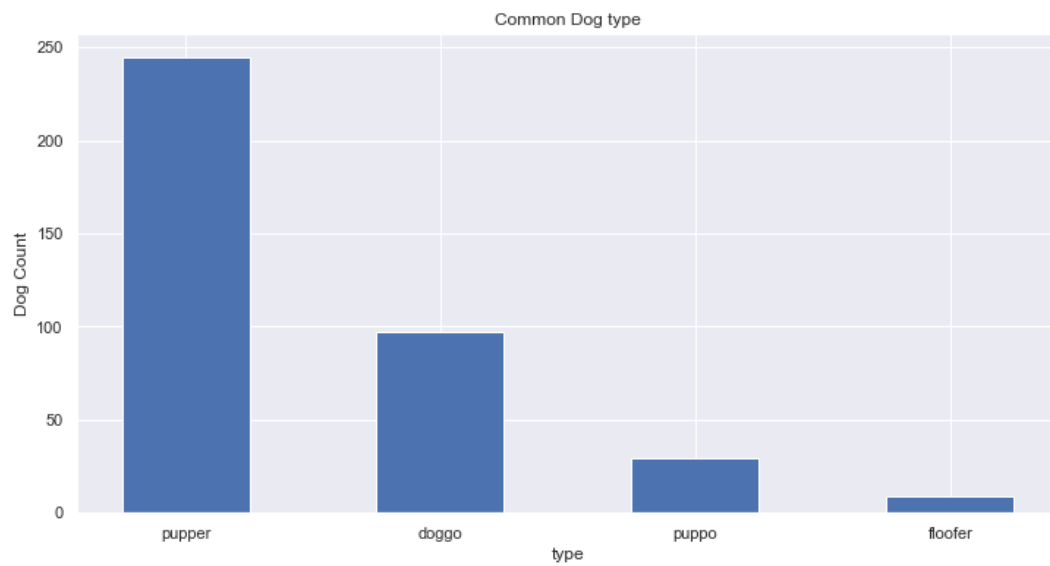

I checked if there any duplicate , null and missing values . and I fixed it .

### IN Cleaning :

I dropped the columns with none value

## Insights

\_ The most dog type tweeted

In the graph above shows that “pupper” is the most tweeted dog type .

\_ The most prediction dog using a neural network that can classify breeds of dogs .

\_ The Twitter account We Rate Dogs (@dog\_rates) is devoted to humorously reviewing pictures of dogs doing adorable poses .
